

Anything but ordinary.

QUALITY AT ALL ALTITUDES.

In collaboration with aviation.

**KOPP Schleiftechnik -
Tradition and progress since 1970**

Kopp Schleiftechnik tools are used in a wide variety of industries. Whether aviation, medicine, automotive, power engineering or tool making - our solid carbide milling cutters, special tools for milling and drilling, our moulding and turning plates as well as our regrinding service guarantee the highest level of precision, quality and longevity.

Nearly 50 years of experience and insight into a wide variety of industries make Kopp Schleiftechnik a competent partner in tooling technology. In our work, we make the difference: fast processes, exceptional accuracy and proximity to customers.

EXCELLENT RESULTS FOR THE AVIATION

Temperature fluctuations, high demands on the material, absolute safety with constant weight savings - the specifications for production in aviation are immense. Kopp Schleiftechnik supports companies in the aviation industry with the right tool for excellent processing results.

Kopp Schleiftechnik in collaboration with aviation

In aviation, components are confronted with particularly high loads and the corresponding requirements. In the industry there is a high level of manufacturing in which our tools have proven themselves. The drills and milling cutters from Kopp Schleiftechnik are used, among other things, for the production of impellers or blisks. When manufacturing the components, it is particularly important to deliver absolute and constant precision. Here our tools and the regrinding service prove convincing with their consistent quality and longevity. In addition, transparency and integrity are important, all our services are internally documented in complete secrecy and can be tracked at all times by the customer.

Together with our customers, we design tools which meet all requirements. We are happy to advise you on the topic of aviation tooling solutions.
